Introduction 3-4

Getting the best from Canon
multifunctional devices 5-6

How to ensure it's Genuine Canon 7-8

Product ranges:

For Black and White devices 9-10

- Toners 11-12

- Drums 13-14

For Colour devices 15-16

- Toners 17-20

- Drums 21-22

Canon Genuine Consumables are designed specifically for Canon's advanced printing technology.

When you choose a Canon print or copy device, you're making an investment in quality, reliability and value.

Like millions of delighted customers around the world, you know that you can trust Canon machines to deliver the highest levels of print clarity and consistency. Getting the best from those Canon machines is based on two very important things. The first is Canon's 6 stage Advanced Printing Process, the second is Canon's Genuine range of toners and drums.

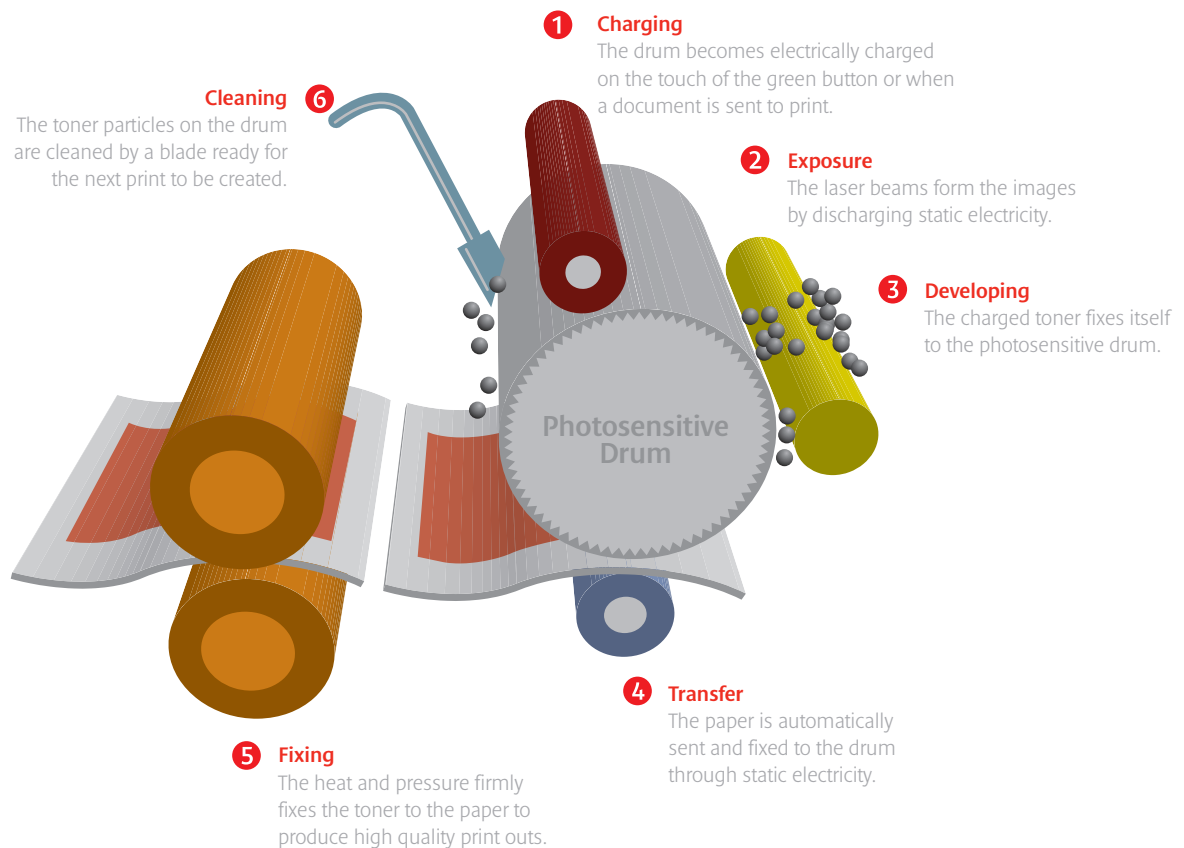

These Genuine toners and drums are designed specifically to match the technology of Canon machines aiding the smooth running of every stage in the Printing Process.

So you can be confident that you're using products developed with one aim in mind - to create vibrant quality prints time after time.

There are lots of reasons for choosing Canon Genuine toners and drums.

Quality, reliability and consistency are just three of them.

The 6 stage Advanced Printing Process

Because Canon designed these critical print processes, they know how to create drums and toners to maximise their performance and get amazing results on paper.

Canon's Genuine Toners and Drums, set the tone for print quality, productivity and reliability.

Canon's Genuine range of toners and drums brings out the best in Canon devices by matching their specifications. The technology of every toner and drum is constantly researched and developed to add quality and value to your Canon print output.

To work efficiently, toners and drums need to maximise the potential of today's high speed, high quality, high productivity print devices.

Why Canon Genuine Toners?

Toner is very important to the developing, transfer and fixing parts of the printing process.

Canon uses two types of toner – Pulverised and Polymerised, both specially developed to offer many advantages to Canon's advanced printing system.

One major benefit is improved print quality. In Canon's colour print devices, the advanced reproduction capability of Canon toner enables the colour 'gamut' to be significantly enhanced. For black and white prints, Canon's extra small particles enable sharper, higher quality images.

By melting faster and at a lower temperature than conventional toner, Canon Genuine toner fixes the image on the page more thoroughly using less electricity.

Canon toners are also user friendly. The easy-change automatic supply container saves the operator time and mess.

Why Canon Genuine Drums?

The drum is the heart of image formation, involved in the vital processes relating to print quality.

Canon uses two types of photosensitive drum, both designed with even charging characteristics to ensure stable text and graphic images.

Canon's A-Si (Amorphous Silicon) drum is designed to maximise the reliability and high output speed of Canon's advanced print devices. Its semi-conductive coating and intelligent print quality control enable a single A-Si drum to offer superior performance for literally millions of prints.

Canon's OPC drum has an organic photo conductive coating for electro-static charge, making it not only highly efficient in imaging but also a highly effective tool for combining print quality, economy and easy maintenance.

Genuine Canon Innovations

Canon is continually innovating its toners to suit the changing specifications of every machine. Latest products include the new C-EXV19 toners and drums for imagePRESS C1, the C-EXV21 for iRC3380i, the C-EXV17 for iRC4580i and many more.

How do you ensure that it's Genuine Canon?

Canon want you to achieve the quality control, optimum performance and increased life span you deserve from your Canon machines. So how do we make sure that you benefit from the use of Canon Genuine consumables?

Guaranteed to have been through our rigorous checking process, Canon toners and drums are the genuine article.

We manufacture under a genuine label

To make it easier to make the right choice of toners and drums, all Canon products sold within the EMEA market now carry a distinctive Canon Genuine logo.

As a further safety check on products frequently counterfeited, you'll also find a distinct new Canon hologram which turns from gold to greenish-blue when viewed at an angle.

We help you recognise Canon Genuine products from counterfeit

With a 900%* increase in counterfeit** products in Europe, identifying fake toners and drums is more important than ever.

Canon are working with enforcements and trading authorities in many countries thus making counterfeiting more difficult. Canon has also identified 4 key indicators that suggest products may be counterfeit:

1. The price is unusually low.
2. The colour and material of packaging differ slightly from Canon Genuine products.
3. The product themselves are made from poor grade materials.
4. The products are not offered or sold in the usual business manner.

* Statistics taken from EU Institutions press release 'Custom, Counterfeiting and Piracy in 2001' issued from Brussels, 26 July 2002

** Counterfeit, in respect of the Canon products, means the fraudulent imitation of a Canon product which is not manufactured by Canon, but which bears the Canon brand.

We control quality at every stage

As you'd expect from a leader in print and imaging products, Canon strictly control quality standards of products at all stages from product design, testing and manufacture to performance, ease of use and safety. So by the time Canon toners and drums are enhancing your print process, they have been through a rigorous checking process themselves.

Canon Genuine

Toners and Drums for Black and White devices

Canon's new Toner and Drum for the new iR7105 production engine

High-end production capabilities are now available to the mid-market thanks to the iR7105 production engine, with its outstanding print performance at a consistent 105 pages per minute.

Canon's new toner and drum are specifically designed to achieve the production performance of the iR7105 machine; achieving up to 6 million prints using the Amorphous Silicon (A-Si) drum.
